

12.3.1.4	Philosophical Basis of Statistical Tests .....	278
12.3.1.5	Alternative Hypothesis .....	278
12.3.1.6	One-Sided Alternatives: Which Tail Is Wagging? .....	278
12.3.2	Errors, <i>P</i> -Values, and Power .....	279
12.3.2.1	Type I Error .....	279
12.3.2.2	Type II Error .....	280
12.3.2.3	Power.....	280
12.3.3	General Procedure to Obtain the <i>P</i> -Value .....	281
12.3.3.1	Steps to Obtain a <i>P</i> -Value .....	281
12.3.3.2	Subtleties of Statistical Significance .....	283
12.4	Assessing Gaussian Pattern.....	284
12.4.1	Approximate Methods for Assessing Gaussianity .....	284
12.4.2	Significance Tests for Assessing Gaussianity .....	285
12.4.2.1	Statistical Tests.....	285
12.4.2.2	Transformations to Achieve Gaussianity .....	285
12.5	Initial Debate on Statistical Significance .....	286
12.5.1	Confidence Interval versus Test of $H_0$ .....	286
12.5.1.1	Equivalence of CI with Test of $H_0$ .....	286
12.5.1.2	Valid Application of Test of Hypothesis .....	287
12.5.2	Medical Significance versus Statistical Significance.....	287
12.6	Sample Size Determination in Some Cases.....	289
12.6.1	Sample Size Required in Estimation Setup .....	289
12.6.1.1	General Considerations for Sample Size in Estimation Setup.....	289
12.6.1.2	General Procedure for Determining the Sample Size for Estimation .....	291
12.6.1.3	Formulas for Sample Size Calculation for Estimation in Simple Situations.....	292
12.6.2	Sample Size for Testing a Hypothesis with Specified Power .....	294
12.6.2.1	General Considerations for Sample Size in a Testing of Hypothesis Setup .....	294
12.6.2.2	Power Calculations .....	295
12.6.2.3	Sample Size Formulas for Test of Hypothesis in Simple Situations .....	295
12.6.2.4	Sample Size in Some Other Popular Setups.....	298
12.6.2.5	Nomograms and Tables of Sample Size.....	299
12.6.2.6	Thumb Rules.....	299
12.6.2.7	Power Analysis .....	300
12.6.3	Sample Size in Adaptive Clinical Trials .....	300
12.6.3.1	Stopping Rules in Case of Early Evidence of Success or Failure: Lan-deMets Procedure.....	301
12.6.3.2	Sample Size Reestimation in Adaptive Designs.....	302
	References .....	303
	Exercises .....	304
<b>13.</b>	<b>Inference from Proportions.....</b>	<b>307</b>
13.1	One Qualitative Variable.....	307
13.1.1	Dichotomous Categories: Binomial Distribution .....	307
13.1.1.1	Binomial Distribution.....	308
13.1.1.2	Large <i>n</i> : Gaussian Approximation to Binomial .....	309
13.1.1.3	Z-Test for Proportion in One Group .....	310
13.1.2	Poisson Distribution.....	310
13.1.3	Polytomous Categories (Large <i>n</i> ): Goodness-of-Fit Test.....	311
13.1.3.1	Chi-Square and Its Explanation .....	312
13.1.3.2	Degrees of Freedom .....	313
13.1.3.3	Cautions in Using Chi-Square.....	313
13.1.3.4	Further Analysis: Partitioning of Tables .....	314
13.1.4	Goodness of Fit to Assess Gaussianity .....	315
13.1.5	Polytomous Categories (Small <i>n</i> ): Exact Multinomial Test .....	316
13.1.5.1	Goodness of Fit in Small Samples.....	316
13.1.5.2	Data with Rare Outcomes: Negative Binomial Distribution .....	317

13.2	Proportions in 2×2 Tables.....	318
13.2.1	Structure of 2×2 Table in Different Types of Study.....	318
13.2.1.1	Structure in Prospective Study .....	318
13.2.1.2	Structure in Retrospective Study.....	318
13.2.1.3	Structure in Cross-Sectional Study .....	319
13.2.2	Two Independent Samples (Large $n$ ): Chi-Square Test and Proportion Test in a 2×2 Table .....	319
13.2.2.1	Chi-Square Test for a 2×2 Table .....	319
13.2.2.2	Yates' Correction for Continuity .....	320
13.2.2.3	Z-Test for Difference in Proportions in Two Independent Groups.....	320
13.2.2.4	Detecting a Medically Important Difference in Proportions .....	321
13.2.2.5	Crossover Design with Binary Response (Large $n$ ).....	322
13.2.3	Equivalence Tests.....	323
13.2.3.1	Superiority, Equivalence, and Noninferiority.....	323
13.2.3.2	Testing Equivalence .....	324
13.2.3.3	Determining Noninferiority Margin .....	326
13.2.4	Two Independent Samples (Small $n$ ): Fisher Exact Test.....	326
13.2.4.1	Fisher Exact Test .....	326
13.2.4.2	Crossover Design (Small $n$ ).....	327
13.2.5	Proportions in Matched Pairs: McNemar Test (Large $n$ ) and Exact Test (Small $n$ ) .....	328
13.2.5.1	Large $n$ : McNemar Test .....	328
13.2.5.2	Small $n$ : Exact Test (Matched Pairs).....	329
13.2.5.3	Comparison of Two Tests for Sensitivity and Specificity: Paired Setup .....	330
13.3	Analysis of R×C Tables (Large $n$ ).....	331
13.3.1	One Dichotomous and the Other Polytomous Variable (2×C Table) .....	331
13.3.1.1	Test Criterion for Association in R×C Tables.....	332
13.3.1.2	Trend in Proportions in Ordinal Categories .....	332
13.3.1.3	Dichotomy in Repeated Measures: Cochran Q-Test (Large $n$ ).....	334
13.3.2	Two Polytomous Variables.....	335
13.3.2.1	Chi-Square Test for Large $n$ .....	336
13.3.2.2	Matched Pairs: I×I Table and McNemar–Bowker Test.....	337
13.4	Three-Way Tables.....	337
13.4.1	Assessment of Association in Three-Way Tables.....	338
13.4.2	Log-Linear Models.....	340
